

# CBI SEMINAR

11h00 A.M

FRIDAY  
MAY 13 TH 2022

## Rebecca Piskorowski

Inserm UMR1266 - Institute of Psychiatry and Neuroscience of Paris  
Université Paris Descartes

“Memorable first impressions a  
hypothalamic-hippocampal circuit  
underlying memory formation of  
novel experiences”

We tend to remember the first time we meet someone better than the 15th time. In this talk I will present data supporting how we think social interactions alter activity in the hippocampus, drawing on optogenetics and slice physiology to examine inputs from the hypothalamic supramammillary nucleus to hippocampal area CA2.
